JumpStart Wireless™ Announces Wireless Barcode Scanning and Printing

Delray Beach, FL – February 10, 2006 – JumpStart Wireless™ Corporation, a leading provider of hand-held wireless solutions for mobile workforces, announced enhancements for barcode scanning and printing with mass market wireless devices like Research In Motion BlackBerry and programmable mobile phones...

In conjunction with Infinite Peripherals, JumpStart Wireless now provides sophisticated printing and barcode scanning solutions for mobile workers. With the JumpStart Wireless BusinessSuite mobile field staff prepare punchlists, timesheets, inspections, and daily reports with mobile phones and BlackBerry devices. New enhancements allow barcode scanners to capture information at remote locations, process it on their handheld devices, and transmit the information to corporate databases. With barcode scanning, mobile staff can now perform inventory management, track pickups and deliveries, read employee badges, and gather other bar coded information.

In addition, BusinessSuite now supports printing using Infinite Peripherals mobile printers. Mobile workers can produce bills of lading, job status reports, receipts, and signature sheets for customer approvals.

Mobile printers and bar code readers are connected to wireless handhelds by either USB cables or Bluetooth wireless communications.

With printing and bar code scanning from mass market wireless devices, JumpStart Wireless customers improve mobile staff productivity and accuracy.

About JumpStart Wireless Corporation

The JumpStart Wireless BusinessSuite™ affordably extends existing corporate software applications to mobile workers using wireless handheld devices. JumpStart's patent pending Form Engine™ automates existing paper forms, including work orders, daily reports, punch lists, inspections, and timecards. Eliminating the cost of collecting, transmitting, and keying in paper reports, BusinessSuite delivers field information directly into existing enterprise billing and management software systems. BusinessSuite customers report rapid payback and more productive mobile staff, adding as much as \$300 - \$500 per mobile staff member per month. BusinessSuite is easy to use, easy to deploy, works with popular and inexpensive devices, and integrates with most existing enterprise software.

BusinessSuite includes GPS location services, credit card swipe, bar code reading, and printing working from a wide variety of mobile phones and wireless PDAs. BusinessSuite applications are tailored to meet the unique requirements of each customer. Sophisticated wireless capabilities – disconnected operation, embedded security features, device independence, and centralized management – are automatically built into every BusinessSuite application.
