

JumpStart Current Customers

Current JumpStart customers manage a million work tasks each month. Our customers have reduced back office staff from 100 to 30, increased billing by 20-40% per employee, and added 2 daily hours of productive time for EACH employee or contractor in their workforce.

JumpStart has been used to deliver mission critical applications for Fortune 500 companies like Charter Communications (formerly Time-Warner), Ecolab, Fluor Construction, Cox Communications, Starbucks, and TGI Fridays. See attached slides with case studies.

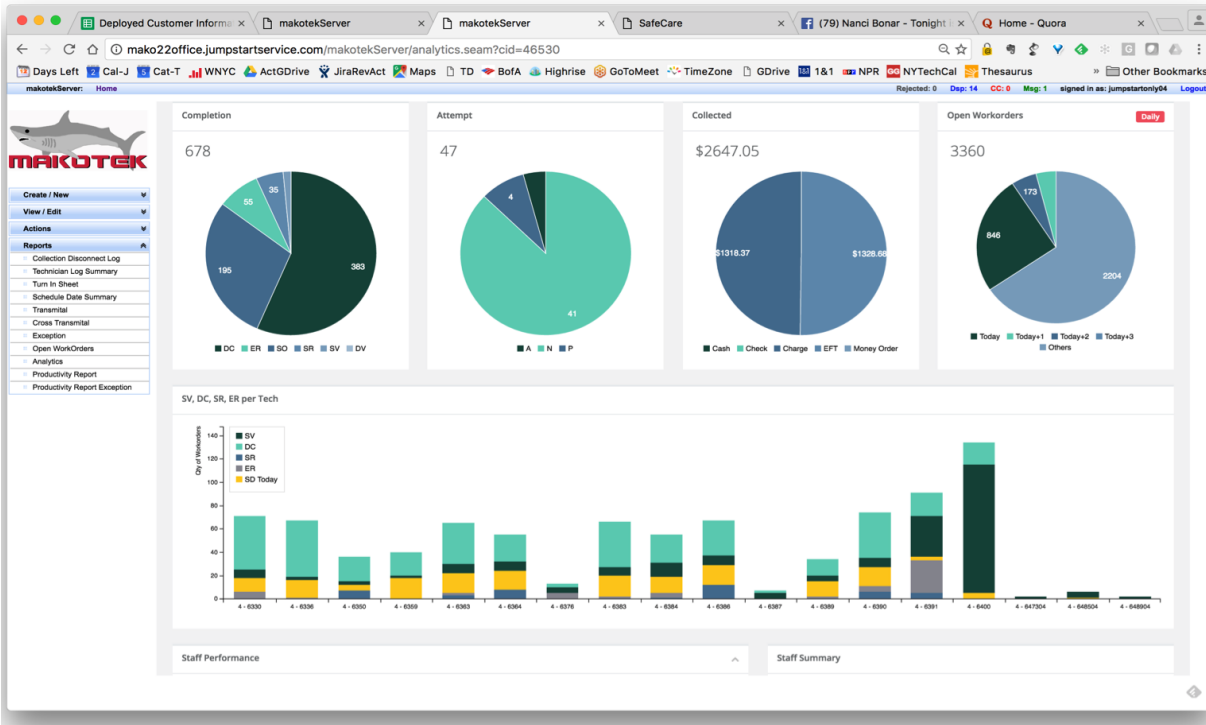

Example for Managing Contractors and their Performance

Here is an example production JumpStart mobile app with office desktop dispatching and analytics screens. The mobile apps provide complete work tracking information for contractors performing work tasks. Contractors are dispatched to customers using maps of available work. The contractors collect information as they do their work. Results are reported back to the office, generating sophisticated analytics validating field compliance and performance.
